Summary

Computer Engineering undergraduate (CGPA 8.64/10) who has shipped production code — most recently the entire frontend of an internal HRMS now used company-wide by 100+ employees, built with one other engineer on an Agile pull-request and code-review workflow. Strongest in full stack JavaScript and TypeScript against RESTful APIs, comfortable in Python and C++, and 150+ problems into data structures and algorithms practice. Looking for a software engineering internship where the work actually ships.

Education

Thapar Institute of Engineering and Technology — Patiala, Punjab
B.E. Computer Engineering | CGPA: 8.64/10 — *2024 – 2028*

Sant Gyaneshwar Model School — New Delhi
Senior Secondary Education (CBSE) | 81.8% — *2022 – 2024*

Experience

Codeblox Systems Pvt. Ltd. (Swiftex) — Noida, Uttar Pradesh
Software Developer Intern — *June 2026 – July 2026*

- Completed structured training in advanced React, Redux, and backend development (Node.js, Express, MongoDB), building a full stack MERN e-commerce application as the capstone.
- Owned the entire frontend of the company's internal HRMS platform in a two-person engineering team, delivering production code through a feature-branch, pull-request, and peer code-review workflow.
- Integrated the React client against a REST API backend, defining request and response contracts with the backend engineer, then implementing, unit testing, and debugging critical authentication and leave-approval paths.

Projects

HRMS – Internal Employee Management Platform | *React, TypeScript, Redux Toolkit, RTK Query, RESTful APIs, Tailwind CSS*

- Built and shipped the production frontend of a role-based HRMS in active company-wide use by 100+ employees, supporting Admin/HR, Manager, and Employee tiers across onboarding, leave management, and approvals.
- Implemented the full employee onboarding lifecycle and a 5-type leave system with comp-off earn/consume logic, secured by JWT httpOnly-cookie authentication, role-based access control, and role-gated routing.
- Developed against an MSW mock REST API layer ahead of backend availability to enable parallel delivery, then migrated to live endpoints; built a custom responsive component library with light and dark themes.

MockMate – AI-Powered Mock Interview Simulator | *Next.js, TypeScript, Claude API, PostgreSQL* — GitHub

- Engineered a full stack interview simulation platform integrating 4 distinct AI services: Claude API for question generation and feedback, Groq Whisper for speech-to-text, Groq Orpheus for text-to-speech, and MediaPipe for real-time face tracking.
- Architected end-to-end authentication, session management, RESTful API routes, and structured feedback report generation using NextAuth.js, Prisma ORM, and PostgreSQL, in a modular Next.js frontend supporting an uninterrupted interview workflow.

RoadReport – Road Condition Reporting Platform | *Flask, JavaScript, Leaflet.js, SQL* — GitHub

- Built a full stack platform for submitting geo-tagged road issue reports visualized in real time on an interactive Leaflet.js map.
- Developed a backend REST data ingestion and retrieval pipeline in Flask over a relational database, supporting multi-category issue classification and centralized dashboard tracking.

AI-Based Multilingual Research Insight System | *Python, IndicTrans2*

- Developed an English-Hindi translation pipeline using IndicTrans2 with preprocessing to improve output quality for research-domain content, structuring outputs as JSON for downstream analytics dashboards.

Technical Skills

Languages: Java, JavaScript, TypeScript, Python, SQL, C, C++, HTML5, CSS3
Frameworks & Libraries: React.js, Next.js, Node.js, Express, Flask, Redux Toolkit, RTK Query, Tailwind CSS, SASS, Prisma ORM, MediaPipe
Databases: PostgreSQL, Oracle SQL (relational), MongoDB (NoSQL), Supabase
Developer Tools & Practices: Git, GitHub, RESTful APIs, JSON, Unit Testing, Debugging, Code Reviews, Agile/Scrum, MSW, VS Code
Core CS: Data Structures & Algorithms, Object-Oriented Programming (OOP), Software Design Principles, DBMS, Operating Systems, Computer Networks, SDLC
Machine Learning: NumPy, Pandas, Matplotlib, Scikit-learn, Supervised Learning
APIs & Services: Claude API, Groq Whisper, Groq Orpheus, NextAuth.js, IndicTrans2

Achievements & Leadership

• **Winner, Founder Mode: A Live Project Evaluation** — recognized for building and presenting a functional full stack product under evaluation conditions (Nov 2025).
• Solved **150+ data structures and algorithms problems** across LeetCode and GeeksforGeeks, focused on arrays, strings, trees, and dynamic programming.
• **Graphic Design Core Member, Saturnalia'25** — created promotional posters and social media creatives for a major college technical fest.
